

Aim : Demonstrate of WEE server and DNS

15/12/22

Topology :

Procedure :

- set up connection between end device, switch and server using general connections
- open server → services → enable http and dns
- add a domain name (eg. www.abc.com)
address = [server ip] [10.0.0.2]
- add and save
- go to web browser in end device and search for the added domain name

Observation .

DNS domain name mapped to IP address which is easy to remember, through which we can access web contents of server.
